TIFT—Compoflex® Heavy Duty Chemiflex® PG-F/PS-F & SG-F/SS-F

US Hose TIFT- Compoflex® Heavy Duty Chemiflex® PG and SG-F hoses are specifically designed for aggressive chemical transfer use where an additional fluoropolymer PTFE liner is required.

998-005 PG-F is available with standard polypropylene coated inner wire and inner liner with additional multiple layers of PTFE liners in the hose wall and bore with a standard high tensile strength outer wire of galvanized steel or optional stainless steel wire.

969-005 SG-F is available with standard T316 stainless steel inner wire with additional multiple layers of PTFE liners in the hose wall and bore with a standard high tensile strength outer wire of galvanized steel or optional stainless steel wire.

These hoses are available with flanges drilled to various international standards such as ANSI, JIS, DIN, BS or AUS or threaded connections or couplers.

All factory fitted assemblies are tested, marked and certified to The United States Coast Guard 33 CFR Section 154.500.
